DETAILED ACTION

*Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 1, 3-5 and 8-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.

The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In claim 1 the phrase "*and one to four inclusive non-chelating ligands*" is not supported by the specification. The specification nowhere specifically identifies these ligands as non-chelating. Note the language applicant uses on page 34 lines 23-24. Applicant states "...may include chelating ligands, such as by way of example only, alkyl and aryl derivatives of phosphines..... In the claim 1 applicant list of non-chelating ligands includes alkyl phosphines.

Furthermore, the specification clearly directs one skilled in the art to use chelating ligands to overcome unwanted side reactions. It is not clear that the

alkyl phosphines are not chelating ligands. This is highlighted by the fact that chelating ligands are the preferred ligands. Thus, absence a specific recitation that a ligand is a non-chelating ligand it is safe to assume that the ligand is a chelating ligand. Therefore, no support exists in the specification for listing all these ligands as non-chelating ligands.

3. Please note that the recitation of these specific ligands has overcome the prior art rejection of Hartwig.
